Questions and Answers for IVCC Website Accessibility Mandate RFP2026-P01 - #3

1. Is IVCC expecting the audit to include manual accessibility testing, automated scanning, or a combination of both approaches?
   - ➢ A combination of both approaches.

2. If manual testing is required, our typical approach is to audit a representative sample of webpages. Would IVCC be able to suggest an estimated number of sample pages per website that you would consider sufficient?
   - ➢ I would suggest 10 pages per site.

3. Is there a budget range that has been set aside for this project?
   - ➢ We are looking for comprehensive budgets/proposals so we can determine the best way to move forward with this initiative.

4. Should audits and remediation be phased by property (e.g., main site → student publications → intranet), or does IVCC prefer a single concurrent cycle across all properties?
   - ➢ Phased by property.

5. For systems partially managed by third-party vendors (e.g., Brightspace LMS, Self-Service, HappyFox), would you like us to coordinate directly with those providers for fixes, or should we deliver findings to IVCC for follow-up?
   - ➢ Deliver to IVCC for follow-up.

6. Beyond training and best-practices documentation, do you want the selected vendor to help formalize or update accessibility governance/policy documents (building on IVCC's existing Website Writing Style Guide and Guidelines)?
   - ➢ Yes
